Published: Friday, 11th September 2015

The MLEI team has succeeded in meeting its local energy investment target of €17M.

The Cambridgeshire MLEI project has achieved its targets with over €17M in energy investments in place for schools, public buildings and a 12 MW solar farm at Soham. The projects under contract will save £1.3M per year and avoid the emission of over 6,000 tonnes of CO₂ annually. The program will prompt construction of over 13.5 MW of renewable energy over the next year. And we're working now to bring on additional schools and buildings to help reduce their energy usage.
