

[Home](#) > [News](#) > [Cambridgeshire Corporate Energy Strategy](#)

A low-carbon and secure supply of energy is essential for our economy. We need energy to heat and light our homes, to power our businesses and to transport people and goods. At the same time, we need to design out energy waste, reduce energy consumption and minimise carbon emissions from the generation and distribution of energy to help combat climate change. There are also significant changes taking place across the energy market. The aim of the strategy is to take advantage of innovation to improve the efficiency of the Council's assets, reduce energy consumption of its services and produce low carbon energy on its assets for local consumption.
