

Projects

Cambridgeshire's Energy Investment Unit is made up of three strands:

1. Schools' Programme - Retrofitting energy conservation measures (ECMs) into schools across the county to create guaranteed energy and financial savings for the schools. To date over 40 schools have completed, or are in the process of, receiving their retrofit.
2. County Council Buildings' Programme - Retrofitting energy conservation measures into county council owned or run buildings. To date, seven council office buildings have been completed, while the second wave will be focusing on the county's libraries.
3. Renewable Energy & Storage - Large scale projects to green Cambridgeshire's infrastructure but utilising cutting edge renewable energy innovations, such as Smart Energy Grids and Electric Vehicle infrastructure.

Click on the links to the left to explore each of these strands further.

Statistics

**Total PV Generation =
1,016,847 kWh**

**This is enough
electricity to make:**

50,842,373 cups of tea
